

NEW WAYS OF TEACHING AND  
LEARNING

# Introduction of technology in our classrooms

**INS Gabriel Ferrater i  
Soler**

During the next course, we will introduce a new type of learning which involves the use of technology. The center will provide students with laptops and wifi for those who lack mobile data. Therefore, students will have to bring their technology devices every day.

## REASONS

Why did we chose to introduce technology in our classrooms?

### Future is coming

Technology is evolving, and students should learn how to take advantage of it. Consequently, they should master their knowledge of how to use it.

### Dynamic lessons

Lessons will be more dynamic after introducing didactical games, which include the participation of the whole class.

### Adaptation to change

Nowadays, children are growing up with technology surrounding them. For that reason, they acquire knowledge differently than in the past. The education system must adapt to the new ways of learning.

## BENEFITS

Which are the benefits of this change?

### Gain experience

Students will be more prepared for university due to their ease of using technology. Not only will they have the experience of studying with their laptops, but they will also be more agile when looking for reliable information on the internet.

### Increase

### concentration

We will avoid the competitiveness that is created by grades and try o reinforce companionship with didactical games. This will keep students more focused in class and increase their capacity of learning.

### Bring motivation

Students will be more comfortable with the new type of learning as techonogy will bring dynamism. This will keep students motivated to do their homework and find new ways of getting their work done in a faster and easier way.
